

# Square Tubing

## Wheatland Tube Company - Squares and Rectangles

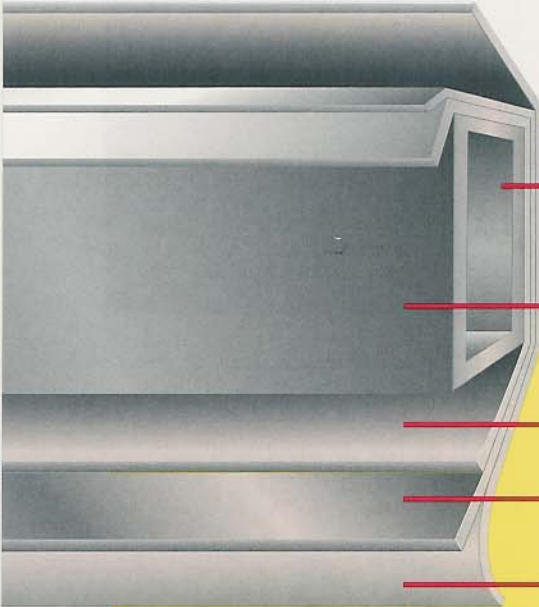

### Galvanized Steel Tubing for Ornamental Fencing and Custom Framework Applications

Manufactured with the highest quality steel and forming processes to ensure strength, beauty and construction integrity, Wheatland's galvanized square and rectangle products are protected with a clear organic coating that provides excellent adhesion properties for most paint and powder coatings. Painting or powder coating over Wheatland's galvanized steel tubing provides superior corrosion resistance than coating over non-galvanized steel tubing.

Wheatland's square and rectangle products are conveniently available at our Chicago, IL and Little Rock, AR facilities for distribution in mixed truckload shipments with our other fine residential, commercial, spec tube and pipe products.

Wheatland Square and Rectangle Tubing offers four-way protection against corrosion and white rust.

- 
- **Corrosion resistant interior coating** protects against the condensation build-up that causes pipe to rust from the inside
  - **Cold rolled, high strength steel** provides a minimum yield strength of 50,000 psi
  - **Continuous hot-dip galvanized coating**
  - **Intermediate conversion coating** inhibits white rust
  - **Clear organic coating** seals in protection, and provides a smooth, lustrous finish
